Town Transit

PREMIER WIRELESS™

Powered by unitegps.com

Rider App

The mobile app for riders includes route schedules and live bus locations.

- Easily view all of the available vehicles & routes
- See real-time locations of all available vehicles

Automated Annunciations

The in-vehicle tablet, used for passenger counting, easily connects with the PA system to automate annunciations.

- Automate stop arrival announcements for a better rider experience

Mobility & Accessibility

Ride scheduling makes it simple to provide transportation for riders with disabilities.

- Easily load your rider list to start scheduling rides
- Mobile app for drivers includes trip manifest, maps & reporting

Ridership & Routing

Manage and create routes based upon accurate ridership data by block, route and time of day.

- View passenger counts with heat maps to maximize routing
- Plan & publish routes with integrated run cutting solution

GPS & Reporting

Easily monitor your entire fleet from one location with GPS updates every 5 seconds.

- Identify speeding, rail track & stop sign violations
- Automatically generate mileage & NTD reports

GTFS Integration

Integrate your transportation system with other local public transit systems using General Transit Feed Specification (GTFS)

- Allows riders to easily plan travel using multiple modes of transportation
